

About Us

We are a complete engineering solution company, providing best-in-class engineering services in product design and manufacturing. Our team of engineers with large years of industrial experience in product design and manufacturing process are extremely determined to deliver timely, cost-effective quality products and services. We have excellent facilities to do CAD modeling, drafting and reverse engineering. We partner with the manufacturing experts for ferrous and non-ferrous castings and forgings, precision parts machining and plastic injection molding.

Our obsession with quality and constant endeavor to perfect our methodologies and processes in project management helps us be a very cost and quality conscious company with a high rate of customer satisfaction. We are focused on continuous business system development, basically in all engineering processes. Our engineers bring a unique blend of knowledge base and technology expertise together to quickly and accurately serve the requirements to the customers' vision.

Value Proposition

It is our firm belief that technical competency, skill and expertise are key enablers required for fundamental alignment with customers' business requirements and support. Our strong business acumen coupled with ability to innovate with technological strength provides unique, pragmatic and yet cost-effective design and manufacturing services which will add value to customer business and yield measurable returns and consistent growth.

We Speak, We Do

In this ever-changing world of markets, competition and technology, continuous iterations of design and product development requires timely services to be successful in business. We update knowledge of fast changing application software for engineering solutions and services and jointly work with the customers and understand requirements in-depth, leading to quick project implementation and good success rate. We use our technical expertise to turn customers' requirements into pragmatic outputs through meticulous planning and execution. We always help to minimize and share the risks with customers.

We Focus, We Deliver

Our solid commitment to the time and money required to complete each job, carefully delineating the value customers receive with each deliverable. We deliver the projects consistently on time and within the budget that guarantee to help attain your final business objectives. It is our ability to innovate within a given budget and stipulated time frame that sets us apart from the competition.

People

As a company, we are guided by our strong moral and ethical values and conditioned by spiritual awareness. We are able to master and stay in the know of the latest technologies and concepts and provide the best-of-breed solutions to our customers with our higher-than-average intellectual prowess and with our commitment and dedication. We strongly believe that in this ever-changing world of technology, our strong values have to remain constant, even in the face of adversity. We diligently manage and deploy the right intellect for the right projects to maximize returns and value addition for our employees, customers, partners and investors.

Leadership and entrepreneurship are some of the qualities that we look for in our people before we make them as part of our family. This positive energy has its positive effects on our interaction with others, both in private and professional life. Customers notice our enthusiasm and a feeling of energy and vitality, zest for life and a feeling of one, while working with us.

Business philosophy

We do not believe in the 'big-bang' theory! There is neither a beginning nor an end. Our business philosophy is based on evolution and adaptation. We don't just come in with an alien result and disappear into thin air. We believe in long-term partnerships, starting in a very small way. When we become part of

our customer team, their pains are our pains and our gains are their gains. We shall always strive wholeheartedly, to ensure continued success for customers.

Commitment & Focus

Our commitment to each and every customer is guaranteed, irrespective of the value of the engagement. Each of our project engineers/consultants is a self-starter and independent to manage projects, akin with the customer to best of requirement. This model is resulting in faster turnaround time, stronger and personal commitment, customer intimacy and effective solutions. The projects we deliver will be at a value that is often irresistible and compelling to customers, by bringing together our intellectual capital, knowledge and physical infrastructure, and industry-leading best practices along with our commitment to each and every customer engagement.

Quality Excellence

It is our ongoing endeavor in achieving excellence in whatever we do, which is driven by experts in quality management systems and business excellence. Our continuous improvement processes introducing new technology focus on defect prevention. Recognizing the importance of quality to meet customer needs, we have instituted stringent quality assurance and control measures. Changing business needs, suggestions for improvements and analysis of process performance drive our process improvements. In order to achieve a reliable product quality, we have standardized on project management methods for managing projects from conception to completion.

Centre of Excellence

We have developed a robust center of excellence for all the design and manufacturing needs which facilitates new projects with clearly marked deliverables and time frames. We lead customers through a low-risk path for high quality results with our approach, methodology and commitment.

Technology Expertise

Our depths of experience across the entire spectrum of tools enable us to work with all leading mechanical design software and mechanical products manufacturing.

Vertical Exposure in Engineering Solutions

Years of Industrial experience and expertise have enabled us to bundle the benefits of some of the best practices across the industries as part of our solution services.
